Assembly: functions

COSC 208, Introduction to Computer Systems, 2022-03-31

Announcements

• Project 2 due tonight

Warm-up

Q1: The following C code was compiled into assembly (using clang). For each line of assembly, indicate which original line of C code the assembly instruction was derived from.

```
int log10i(int num) {
2
        int result = -1;
3
        if (num > 0) {
4
            result = 0;
5
            while (num >= 10) {
6
                 result = result + 1;
7
                num = num / 10;
            }
8
9
        }
10
        return result;
11 }
```

```

```

Q2: Write a function called log10i_goto that behaves the same as log10i but matches the structure of the assembly code that will be generated for log10i. On your own paper...

Functions

Mapping C functions to assembly code

```
1 int multiply(int a, int b) {
2    int c = a * b;
3    return c;
4 }
5 int volume(int x, int y, int z) {
6    int w = multiply(x, y);
7    w = multiply(w, z);
8    return w;
9 }
```

```

```

Q4: Tracing assembly code with functions. Assume the registers have the following initial values:

- pc = 0x4005b0
- sp = 0xFF0
- x30 = 0x4005dc

Practice with functions

Q5: The following C code was compiled into assembly (using clang). For each line of assembly, indicate which original line of C code the assembly instruction was derived from.

```
int sum(int a, int b) {
1
        int c = a + b;
2
3
        return c;
4
    int triple(int u, int v) {
5
6
        int r = 3;
7
        int s = sum(u, v);
8
        int t = s * r;
9
        return t;
10
     }
```

```
0000000000400544 <sum>:
